

SAMPLE HISTORICAL AUDIT REPORT

EXECUTIVE SUMMARY

This report presents the results of a comprehensive audit of 20 synthetic invoice transactions evaluated by the AEGIS verification engine. The portfolio exhibits a risk profile consistent with early-stage capital deployment, with 40% of invoices flagged for mathematical anomalies, statutory non-compliance, or transit physics violations. Total flagged value: INR 4,28,000.

KEY METRICS

Total Invoices Audited: 20
Passed (PASS): 1
Failed (FAIL / REJECT): 16
Inconclusive (INCONCLUSIVE / PEND): 3
Anomaly Coverage: 100%
Highest Severity Found: CRITICAL

ANOMALY BREAKDOWN

GSTIN Checksum Failure..... 1 invoice
Self-Supply Detected..... 1 invoice
Duplicate Invoice / IRN..... 2 invoices
Transit Physics Violation..... 3 invoices
Document Chronology Violation..... 4 invoices
Tax Arithmetic / Geometry..... 3 invoices
Statutory Law Violation..... 3 invoices

RISK FINDINGS FOR CRO REVIEW

1. Capital Exposure: INR 4,28,000 in flagged invoices requires immediate reconciliation before funding pipeline expansion.
2. Statutory Risk: 35% of invoices exhibit GST compliance failures (dual tax regime, place of supply mismatches, missing Part-B updates).
3. Operational Alpha: AEGIS detected 6 distinct anomaly classes across 20 invoices â manual sampling would miss 70% of these signals.
4. Recommendation: Deploy automated verification gates at invoice submission to prevent capital leakage.
